Designed in Australia to conform to all Standards.

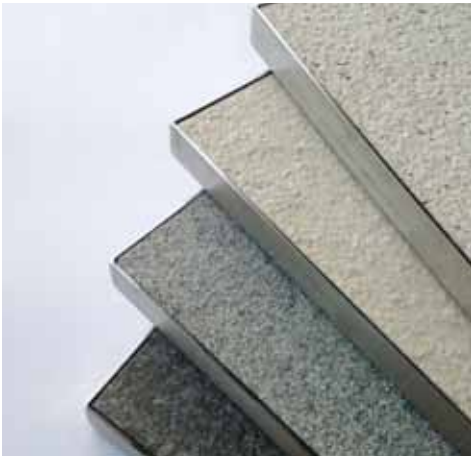

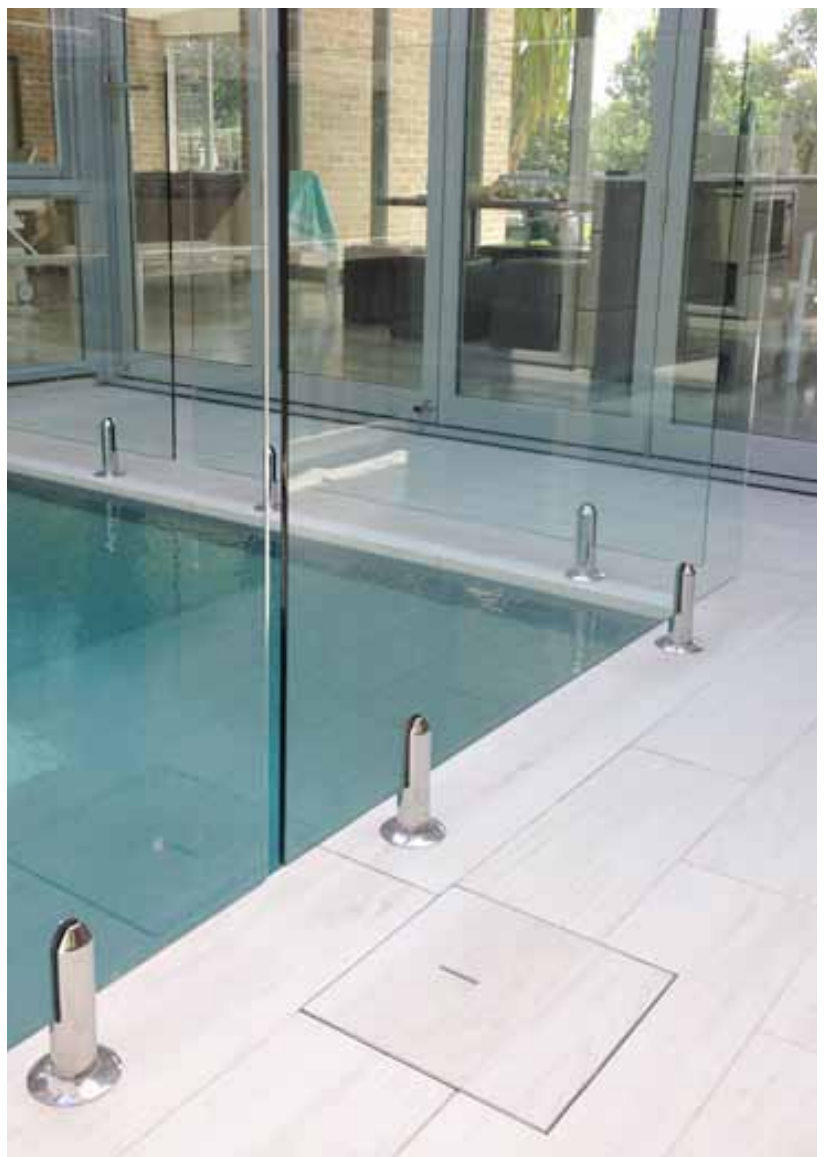

Child proof with no weight requirements.

Solid 5 sided Stainless steel tray; minimises breakages

Solid polished stainless steel key for easy removal of lid

SKIMMER LIDS
PTY LTD
HIDDEN SAFETY

The QUAD Skimmer Lid is made with an infill from your selected paving and is supported with a 2mm thick 316 marine grade stainless steel tray. This protects it from chipping and cracking; possible breakage is also minimised.

The dimensions of the QUAD tray are 336 x 336mm. Porcelain, ceramic tiles or natural stone can be used as an infill. The thickness of your selected pool surround will predetermine which of the 4 tray depths is required.

The QUAD Key is required for lid removal. This meets the Australian Standard AS 1926.3-2010 Swimming Pool Safety - Water Recirculation Systems required for skimmer box lid certification. The key-way that is cut into the paving material also provides the required ventilation.
